Business Continuity Planning (BCP) includes planning for the entire set of processes, technology, and people issues associated with keeping your business functioning through disruption events. It covers non-IT related aspects such as key personnel, key business processes, functions, facilities, crisis communication and the protection of assets and reputation. It also refers to the technology DRP as part of the solution.

Disaster recovery planning (DRP) is the planning, process, policies and procedures that are related to preparing for the recovery from outages in the technology infrastructure that is critical to an organization after a natural or manmade disaster. DRP is a subset of Business Continuity Planning. DRP is mainly focused on recovering systems, applications, data, hardware, communications (telephones and networks) and other IT infrastructure.
